

— VIRTUAL CIO & CYBERSECURITY ADVISOR

Your Business Deserves a Clear IT Plan.

Virtual CIO & Cybersecurity Advisor

For growing businesses that need clearer priorities, steadier decisions, and stronger control — without hiring a full-time CIO.

Jason Chua

Virtual CIO & Cybersecurity Advisor · Singapore

Assessment + Roadmap · Ongoing Advisory · Vendor-Neutral Guidance

Built for growing SMEs that need clarity, not more noise.

Growing businesses rely heavily on cloud platforms, email, software vendors, and outside IT providers — but often still lack clear ownership of IT strategy and cybersecurity direction. This advisory service is designed for SMEs that want better decisions, better visibility, and a more structured way to manage risk, technology, and external vendors.

This is likely a good fit if your business:

- Has 10–100 staff
 - Does not have an in-house CIO or security leader
 - Relies on Microsoft 365, cloud tools, external IT providers, or multiple vendors
 - Is making IT decisions reactively instead of strategically
 - Wants clearer direction around cyber risk, continuity, backup, governance, and spend
-

You may recognise some of these situations:

- Technical proposals land on your desk, but it is hard to tell what is necessary and what is not
- You worry about ransomware, downtime, or data loss, but there is no clear plan
- IT conversations feel reactive and overly technical instead of structured and business-led
- Important vendor and renewal decisions are made without an independent advisor at the table

Outcome-led support for businesses that need clearer direction.

1) Strategy & Roadmap

Get a practical 12–18 month IT and cybersecurity roadmap aligned to business priorities — so decisions are clearer, sequencing is better, and investment becomes easier to justify.

2) Vendor & Spend Control

Review proposals, renewals, and outside recommendations with an independent advisor on your side — reducing poor-fit purchases, unnecessary complexity, and avoidable overspend.

3) Risk, Continuity & Cyber Posture

Build a more practical approach to cyber risk, backup, recovery, and continuity without overengineering the environment.

4) Leadership-Ready Clarity

Give leadership a plain-English view of priorities, risks, trade-offs, and next steps — so IT becomes easier to govern and easier to discuss.

A simple way to bring structure to IT and cybersecurity.

The engagement model is intentionally straightforward. Most businesses do not need more complexity — they need clearer direction, better oversight, and a practical starting point.

01

Discover & Assess

We begin by reviewing your current setup, business priorities, key vendors, known pain points, and the main risks or gaps affecting the business.

02

Guide & Govern

From there, I help shape the roadmap, advise on priorities, challenge poor-fit recommendations, and guide leadership through key IT and cybersecurity decisions.

03

Review & Improve

As priorities evolve, I help leadership revisit progress, assess changes, and keep decision-making aligned to business needs.

The goal is simple: clearer priorities, steadier decisions, and less dependence on reactive vendor-led IT.

Start with clarity.

Most businesses do not need to jump straight into a long-term engagement. The best first step is usually to understand the current state, identify the key gaps, and set direction properly.

BEST FIRST STEP

IT & Cyber Maturity Assessment + 12-Month Roadmap

This engagement gives leadership a clearer view of:

- Current gaps and immediate concerns
- Practical cyber and continuity risks
- Vendor or control observations
- Priority actions over the next 12 months
- Where to focus first, and what can wait

SGD 2,500 – 3,500

Indicative fixed fee · May be credited toward an ongoing retainer if continued within 30 days

ONGOING ADVISORY

vCIO / Cybersecurity Advisory Retainer

For businesses that want regular strategic guidance, vendor oversight, and leadership-level visibility. This may include:

- Roadmap review and reprioritisation
- Vendor and proposal review
- Advisory support for important IT decisions
- Ongoing governance and risk visibility

From SGD 1,500 per month

Scope-dependent · Minimum 3-month term

Most clients start with an Assessment + Roadmap first, then move into ongoing advisory only if regular guidance is useful.

A limited number of reduced-rate engagements are available each year for registered non-profit organisations.

— ABOUT JASON

One advisor. Direct access. No layers in between.

I work with growing SMEs that need clearer IT and cybersecurity leadership, but are not yet ready for a full-time CIO or internal security lead. My background spans business-facing and technical roles across IT solution selling, presales, troubleshooting, and advisory work. That allows me to sit between leadership, vendors, and technical teams — translating complexity into clearer business decisions.

The aim is simple: to help businesses make smarter technology decisions, reduce avoidable risk, and bring more structure to how IT is governed.

Credentials

- 15+ years across IT and cybersecurity-related roles
- CompTIA Security+
- BSc Management, University of Manchester
- Vendor-neutral advisory approach

How I work

- Advisory-led, not ticket-led
- Strategy and governance — not day-to-day helpdesk
- Implementation via CSI Tech or your existing provider
- Any commercial relationship always disclosed upfront

NEXT STEP

Start a Conversation

A practical 45-minute conversation to review your current setup and determine the right next step.
